ImageJ Macro code highlight

You can download (right-click, save link as...)

 **ijm_ColorCode.xml** 8 KB
Download

To import into Notepad++

From Notepad++

Language → Define your language... → Import...

You should then see a `ijm` appearing under Define your language

Export highlighted code to Powerpoint, Word, etc...

Select the code you want to export and go to

Plugins → NppExport → Copy RTF to clipboard

You can then paste directly into Word or Powerpoint

Run code directly from Notepad++

Run > Run... >

C:\Fiji.app\ImageJ-win64.exe -macro "\$(FULL_CURRENT_PATH)"

NB: you may need to replace "C:\Fiji.app\ImageJ-win64.exe " by your actual path to FIJI

Have autocomplete into Notepad++

You can download (right-click, save link as...)

 **ijm.xml** 13 KB
Download

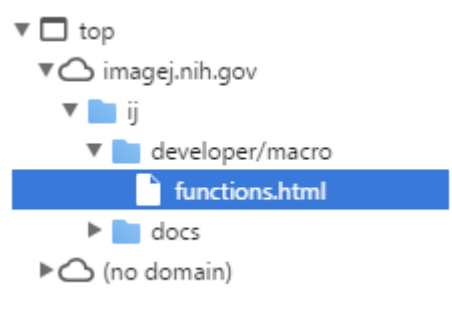

and add it to ..\Notepad++\plugins\APIs\

To generate the ijm.xml file we wrote a macro that you can download (right-click, save link as...)

 **Macro_html_toxml_4_Notepad.ijm** 970 B
Download

Start the macro and it asks you to select an "html" file, that you can find on the [macros functions page](#) by pressing **F12**
